

Wonjin Eum

(831) 884-2492 | we46@cornell.edu | [linkedin.com/in/wonjineum/](https://www.linkedin.com/in/wonjineum/) | github.com/wonjineum | Monterey, CA

EDUCATION

Cornell University, College of Engineering

Bachelor of Science in Computer Science

Ithaca, NY

Expected May 2028

Relevant Coursework: Object-Oriented Programming and Data Structures (Java); Discrete Mathematical Foundations of Computing; Functional Programming (OCaml); Networks; Introduction to Machine Learning; Information Ethics and Policy

Activities & Organizations: Cornell AppDev, Cornell Data Science, Cayuga Healthcare Consulting, EndOverdose Cornell

EXPERIENCE

LinkedIn

Sep 2025 – Present

Full Stack Engineer Intern

Ithaca, NY

- Developed a full-stack fashion sustainability extension that suggests alternative second-hand items using machine learning
- Collaborated with LinkedIn engineers and mentors through professional workshops to design scalable product features
- Presented the product at **LinkedIn HQ**, incorporating user feedback and iterating on computer vision improvements

CGBio USA

Mar 2025 – Mar 2025

Data Analytics Intern

Irvine, CA

- Contributed to securing the FDA Humanitarian Device Exemption approval for a new biomedical device, Novosis
- Conducted competitive analysis & market research about incidence rates of non-union surgeries in long-bone fractures
- Compiled data demonstrating that radius shaft bone fractures occur in fewer than **8,000** cases annually in the US

Daewoong Pharmaceutical

Mar 2025 – Mar 2025

AI Drug Discovery Intern

Seoul, South Korea

- Worked on pharmaceutical research such as NK & Stem cell culture, gene therapy, and 3D modeling of DNA/protein
- Supported the AI Drug Discovery team manager working with machine learning optimization and bioinformatic tools
- Engaged cross-functionally with **10+** professional mentors to generate and present daily reports to the Head of R&D

PROJECTS

NarcansOS | *Java, Swift, Node.js, PostgreSQL, AWS*

[Github](#)

- Delivered an overdose emergency response app connecting people with Narcan to nearby victims to reduce response time
- Conducted interviews with **5+** survivors to incorporate tangible feedback into creating a more accessible app design
- Worked with Central Coast Overdose Prevention Non-profit organization to scale impact in **3+** counties across California

Eatery | *Swift, UIKit, Figma*

[Github](#)

- Developed a Cornell dining application with **40,000+** downloads, used by **10,000+** students and faculty across campus
- Implemented frontend features and collaborated with backend engineers to reduce latency and enhance reliability
- Collaborated cross-functionally with **60+** iOS, Android, Backend, and Marketing developers across the full project team

Learning Based Cache Eviction | *Rust, Python, PyTorch*

[Github](#)

- Implemented a learned cache eviction policy within a custom-built cache system using the trace data and online training
- Trained light ML models like logistic regression & pairwise ranking with various workloads to optimize eviction decisions
- Evaluated systems tradeoff between hit rate improvement and computational latency, comparing with traditional heuristics

Giggle | *Python, React, Node.js, PostgreSQL, Prisma, Docker*

[Github](#)

- Built a freelance marketplace where AI verifies the quality of deliverables before the payment is released from blockchain
- Designed backend APIs and database using escrow logic & frontend UIs focusing on brand alignment and intuitive UX
- Deployed a MVP on Vercel and presented in **Ramp x AppDev Hackathon**, ranking 5th place among participant voting

Machine Learning Research for Sustainable Fashion Consumption | *Python*

[Publication](#)

- Designed an AI assistant fostering sustainable consumer behavior in the fashion industry by utilizing machine learning
- Trained a convolutional neural network (CNN) system in Python using **70,000** images from Fashion MNIST dataset
- Researched network algorithms & recommendation systems and published a **10+** page paper on Acton STEM Scholars

SKILLS, AWARDS, AND INTERESTS

Languages: Python, Java, C/C++, OCaml, Rust, SQL, Swift

Frameworks & Tools: React, Node.js, AWS, Docker, Firebase, Vercel

Awards: American Computer Science League Finalist; California Science & Engineering Fair Qualifier

Interests: Choir/A Capella, Rock climbing, Journalism, Outdoor backpacking, Korean traditional architecture
